Pride. A pioneer in ergonomic seating, **Pride** fits into most budgets and still manages to offer the full range of adjustments one would expect from a state-of-the-art task/desk chair.

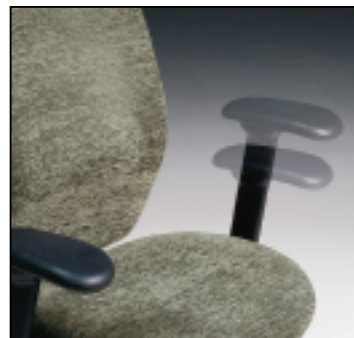

The seat height easily adjusts from 16" to 20.75", which meets ANSI 100 standards, and seat depth is also adjustable to accommodate users of all shapes and sizes. With the adjustable back height, users can quickly find the optimum lumbar support for their individual frames.

The seat also features a variable position seat slide lock to maintain peak comfort in any position the user chooses.

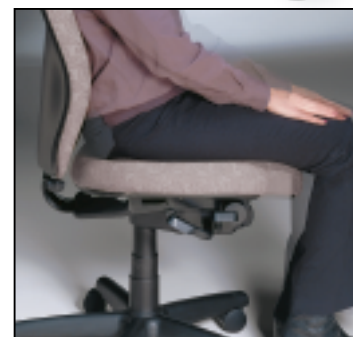

With two arm styles—fixed or height adjustable with pivoting armrests—and the standard forward seat tilt, **Pride** can be configured to meet a wide array of working positions. For more work-intensive postures, the forward tilting seat lock allows for increased comfort and unrestricted circulation. By adding the adjustable arms, **Pride** helps reduce the strain of key stroking and the continuous use of a mouse.

Beyond the comfort of the chair's many features, the **Pride** takes advantage of an understated, elegant design that fits any working environment. Available in black or warm grey, the **Pride** blends into any color scheme.

For a more functional workplace, the back is offered with a durable poly back panel. Otherwise, the fully upholstered back gives the chair a more formal look normally associated with higher end furnishings.

Arms adjust 4" vertically (6-10" above seat). A soft, urethane armrest pivots 360 degrees. The armrest has 4 indents that allow the armrest to snap into position, one straight forward, one each at 20 degrees inward and 20 degrees outward, and one at 180 degrees reversed back position. By pivoting armcaps 180 degrees user can move close to a desk without arm interference.

Pride has a seat slide feature with a 5 position lock-out. Adjusts from 16" to 19". Great adjustment feature for every end user.

Back angle adjustment allows the backrest to adjust 6 degrees forward and 10 degrees backward for a perfect fit.

Pride allows for seat height adjustment between 16" and 20.75" to accommodate each user.

Back height is easily adjusted with an ergonomically positioned adjustment lever. With a vertical range of 4", users can correctly position the lumbar.

The tilt tension knob allows seat tension adjustment to meet any individual's needs.
